

**NAME**

Pod::Perldoc::ToText - let Perldoc render Pod as plaintext

**SYNOPSIS**

```
perldoc -o text Some::Modulename
```

**DESCRIPTION**

This is a "plug-in" class that allows Perldoc to use Pod::Text as a formatter class.

It supports the following options, which are explained in *Pod::Text*: alt, indent, loose, quotes, sentence, width

For example:

```
perldoc -o text -w indent:5 Some::Modulename
```

**CAVEAT**

This module may change to use a different text formatter class in the future, and this may change what options are supported.

**SEE ALSO**

*Pod::Text*, *Pod::Perldoc*
